

Sahib AI V1 Quick Rounds

Reward Integration Update for Uday

Purpose

This document updates only the later rewards/hearts/result-flow guidance for Uday. It does not ask Uday to rewrite working quick-round combat code.

Why this update is needed

Area	Decision
Current Phase 9 code	No formal BattleResult, no coins, no hearts, no Supabase, no XP. This is clean.
Older Phase 12 docs	Mentioned resources, gems, English/progression XP, and reward multipliers. These are now outdated.
Latest decision	Quick rounds produce BattleResult. Base-building consumes it and awards coins only.

Latest final rules

Topic	Rule
Reward types	Coins only
Win	100 base coins
Draw	50 base coins
Loss	25 base coins
Pro 3x	Applied by base-building/subscription, not quick-round combat
Gems/resources/XP	Do not implement in V1 quick-round rewards
Supabase economy writes	Handled by base-building, not quick-round combat

BattleResult contract

Uday should add a small adapter/output layer that converts the ended match object from matchState.js into a BattleResult object.

Required fields: battleResultId, userId, outcome, reason, baseCoins, completedAt, elapsedSeconds, durationSeconds, coreMaxHp, playerCoreHp, enemyCoreHp, playerCoreDamageDealt, enemyCoreDamageDealt.

Ownership split

Owner	Responsibility
Uday / quick-round	Combat, match outcome, match reason, BattleResult adapter
Pranay / base-building	Coins, Supabase economy, Pro 3x, duplicate claim protection, base progression
Shared app layer	Routing from base screen -> quick round -> result/base screen

Do not change

Do not rewrite combat, enemies, map, wall system, Core logic, or working quick-round gameplay. This update is only for result/reward integration.

Files to use

Use the updated MD files in this package, especially UDAY_LATEST_REWARD_INTEGRATION_UPDATE.md, PHASE_PLAN.md, TASKS.md, and REWARDS_BRIDGE.md.

Final clean rule

Quick rounds produce BattleResult. Base-building consumes BattleResult. Quick rounds do not directly award final coins to the base wallet.

You're thinking correctly. Before touching Pranay's MD files, we first needed to clean up Uday's **later reward/hearts/result instructions**, because those older Phase 12 docs had some outdated economy assumptions.

Next to-do order

Step Task	Status
1 Review Uday's MD files and identify conflicts with latest confirmed decisions	 Done
2 List which Uday docs need correction	 Done

Step	Task	Status
3	Create updated Uday MD files without changing combat logic	 Done
4	Send updated Uday package to Uday so Codex follows latest reward/result rules	Next
5	Then you send Pranay's latest MD package	Next
6	I cross-check Pranay docs against Uday current code + Uday updated docs + latest base-building decisions	Next
7	Then we update Pranay's MD package if needed	Next

1 Exact conflicts found in Uday docs

Conflict area	Uday older docs say	Latest confirmed decision	What I changed
 Reward types	Coins/resources/gems/English XP	Coins only	Removed gems/resources/XP from quick-round reward plan
 Reward formula	Win 100%, draw 50%, loss 30%	Win 100, draw 50, loss 25	Replaced percentage multipliers with fixed base coins
 Gems/resources	Mentioned as simple rewards	Not V1	Marked as do-not-build
 English/progression XP	Mentioned	Removed from V1 quick-round reward logic	Marked as do-not-build
 Hearts	4 hearts, 30-min refill	Same, but clarified ownership	Kept rule, clarified access layer

Conflict area	Uday older docs say	Latest confirmed decision	What I changed
 Pro benefit	Remove/reduce wait, pending	Pro = unlimited quick battles/no wait	Updated wording
□ Coin awarding	Placeholder reward bridge	Base-building owns coin claim	Quick round only produces BattleResult
 Duplicate reward claim	Not clearly defined	Must use battle_reward_claims	Added BattleResult ID rule
 Supabase	Not defined	Base-building owns economy state	Clarified quick-round should not write economy coins

Uday's PHASE_PLAN.md Phase 12 was the biggest issue because it still said rewards should include coins/resources/gems + English/progression XP and used win/draw/loss reward percentages.

REWARDS_BRIDGE.md had the same outdated reward-type issue: it listed coins, resources, gems, and English/progression XP, then said final quantities depended on Pranay/base-building. That dependency is useful, but the reward types needed correction.

TASKS.md also had a hearts/rewards/result phase using “simple rewards” and win/loss/draw multipliers, so I updated that too.

2 Uday docs that needed updating

File	Update made
UDAY_LATEST_REWARD_INTEGRATION_UPDATE.md	New correction file explaining latest reward/result contract
PHASE_PLAN.md	Phase 12 rewritten around BattleResult, fixed

File	Update made
	coins, no gems/resources/X P
TASKS.md	Hearts/rewards phase rewritten around BattleResult and fixed coin output
REWARDS_BRIDGE.md	Rewritten to coins- only bridge
QUICK_ROUNDS.md	Updated reward bridge and Pro access wording
V1_SCOPE.md	Updated V1 reward/subscription scope
AGENTS.md	Added latest reward integration rules
Uday_Quick_Rounds_Reward_Integration_Update_Instructions.docx	Short Word guide for Uday
I did not change combat docs like HERO_COMBAT, ENEMY_LOGIC, WALL_SYSTEM, CORE_DEFENSE, or MAP_LAYOUT because those are not the problem.	

3 What this update tells Codex

Clean rule for Uday/Codex:

Do not rewrite working quick-round combat. Only update the Phase 12 result/reward bridge. Quick rounds produce BattleResult. Base-building consumes BattleResult and awards coins.

The final bridge is:

```
type BattleResult = {
```

```
battleResultId: string;
userId: string;
outcome: "win" | "loss" | "draw";
reason: string;
baseCoins: number;
completedAt: string;
elapsedSeconds: number;
durationSeconds: number;
coreMaxHp: number;
playerCoreHp: number;
enemyCoreHp: number;
playerCoreDamageDealt: number;
enemyCoreDamageDealt: number;
};
```

Coin mapping:

Outcome baseCoins

Win	100
Draw	50
Loss	25

Base-building later applies:

```
finalCoins = user.is_pro ? battleResult.baseCoins * 3 : battleResult.baseCoins;
```

4 Download updated Uday package

Here is the updated package:

[Download Uday Quick Rounds Updated Reward Integration MD Package](#)

I also created the short Word instruction doc separately:

5 Message to send Uday

Uday, I reviewed the later quick-round docs and made a small update package for Phase 12 reward/result integration.

Important: this does not ask you to rewrite combat, map, enemies, walls, Core logic, or anything already working.

The update is only for hearts/rewards/result flow.

Latest final rule:

- Quick round should produce BattleResult.
- Base-building will consume BattleResult and award coins.
- Rewards are coins only for V1.
- Win = 100 base coins.
- Draw = 50 base coins.
- Loss = 25 base coins.
- No gems, resources, English XP, progression XP, or reward multipliers.
- Pro 3x is applied by base-building/subscription, not quick-round combat.
- Quick-round should not directly write economy coins to Supabase.
- Base-building will handle duplicate reward claims.

Please use the updated MD package, especially:

1. UDAY_LATEST_REWARD_INTEGRATION_UPDATE.md
2. PHASE_PLAN.md
3. TASKS.md
4. REWARDS_BRIDGE.md

Main purpose: keep your quick-round combat clean and only expose the final BattleResult for Pranay's base-building system to consume later.

Clean next step: send this to Uday. After that, send me Pranay's latest MD files and I'll cross-check them against these updated Uday files.
